

TECNA®

TECNA has been designing and producing resistance spot welders and balancers for more than 30 years. This wide experience in the industrial field qualifies Tecna as a supplier for important car manufacturers and big multinational groups.

PRODUCTS

The wide productive range of TECNA's goes from the resistance welding machines for industrial use with single-phase, three-phase inverter, three-phase D.C. and capacitors discharge technologies, to the machines for car body repair shops and passes through the control units, the transformers, the measurement instruments, as far as a very professional range of balancers.

The experience acquired in the industrial field, as a supplier of very important car manufacturers, the broad know-how, a very high vertical organization of the production process and, particularly, an extreme specialization in the field of resistance welding have permitted important innovations and a huge range of products.
